

# TORQUE

DATA TRANSLATION & MAPPING  
MOTORCITY SYSTEMS

## SEAMLESS COMMUNICATION

On-premise or in the cloud, common solutions like transportation management systems, telematics, and fuel cards can now communicate with each other.

## FLEXIBILITY

Connect systems together with standardized data sets to generate the proper instructions for receiving systems.

## DATA MANAGEMENT

Normalize a variety of data sources and providers through a single, standardized common endpoint.

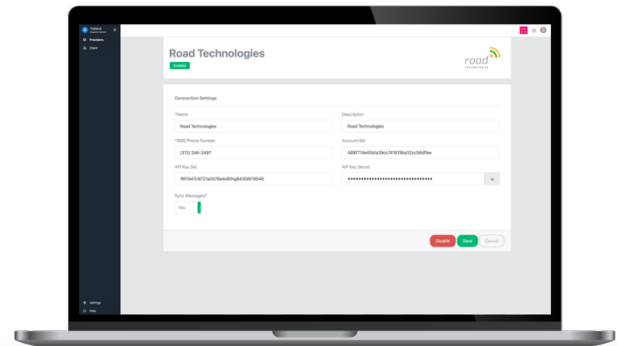

## FULL CONTROL

Choose the data that you want to sync between your systems.

## SUPPORT

Courteous, knowledgeable, and fast customer support provided by industry experts.

- **Cloud-based.** Flexible and scalable to support business growth, and accessible anywhere.
- **Hosted solution.** Reduce infrastructure costs and time spent managing and updating on-premise servers and equipment.
- **Communications focused.** Connections to Motorcity Systems and other third-party transportation applications are configured and managed within Torque.
- **Total transportation solution.** Torque is one component in a family of products. Use one, a few, or all products to manage business needs.

## CONNECT, TRANSLATE, AND MANAGE YOUR DATA ACROSS MULTIPLE SYSTEMS

Connecting two separate software systems together is a challenge, if not impossible. These solutions are often meant to be standalone, connecting to other products and services as decided by the manufacturers, not you. Wouldn't it be great to use a software solution on your terms, connecting one system to another and choosing the data you share between them? Imagine your telematics providers, fuel card solutions, trading partners, and visibility services sharing data with each other. Motorcity Systems' Torque makes that dream a reality. Torque connects all the services that you use together and normalizes the flow of data between them in a simple and straightforward manner. With Torque, you are finally in control of your systems and your data. ■
