

RELAY

Real-Time Messaging Solution

Improve Driver Communications with a Real-Time Messaging Solution

Fleets rely on effective dispatcher-driver communications to provide on-time and error-free service. Yet too many carriers are still using outdated messaging technology and disparate systems that lead to misunderstandings and mistakes.

An integrated messaging platform solves the problem.

RELAY™ from Motorcity Systems connects dispatchers and drivers through a single, unified system that works with your existing in-cab and mobile messaging platforms. The cloud-based RELAY platform improves fleet operations and driver engagement with:

Instant Messaging – RELAY gets information to drivers instantly on any device by supporting and integrating multiple modes of communication: one-to-one correspondence between dispatch and drivers, mass messaging to large customizable groups, and SMS messaging.

Improved Visibility – RELAY provides real-time driver details to dispatch and operations that include current location, HOS status, and contact details.

Unified Workflow – RELAY brings your telematics data together with a 24/7 messenger within a single interface. It also integrates with multiple third-party messaging services.

Searchable Database – RELAY tracks and manages communication history between dispatch and drivers, creating an invaluable database of information that can be searched based on date, driver, or the content of the message.

Top Grade Support – Benefit from Motorcity Systems’ courteous, knowledgeable, and reliable staff of industry experts.

Leverage a Cloud-Based Solution Suite

RELAY is one component in a family of products from Motorcity Systems that work together to drive better results for transportation providers.

Motorcity Systems delivers software solutions and integration services that enable motor carriers to modernize end-to-end operations. Our solutions integrate seamlessly and scale with your existing systems to improve visibility, automate dispatch-to-driver communications, and provide a unified workflow experience. Our flexible deployment methodology allows fleets to evolve at their own pace, maximizing the impact of your capital investments for fast ROI.

Take advantage of our entire platform of solutions to improve automation and decision-making fueling growth and profitability.
