

ROLLER™

A New Way for Drivers to Connect On-the-Go

Improve Driver Experience with a Real-Time Mobile Solution

Motorcity Systems has added a new driver-focused mobile application to their platform of products. ROLLER™ is a purpose-built and easy-to-use mobile application that improves driver engagement with feature-rich messaging, quick and easy document scanning, and upgraded workflows.

Improve your operations with a robust application featuring messaging, document scanning, message and document routing capabilities, and more. Powered by the TORQUE Integration Network, ROLLER is a flexible, modular approach ready to meet the needs of your drivers and fleet.

Improve the driver experience by providing an intuitive mobile app that helps drivers get their work done with greater speed and efficiency with the information they need.

Tailor the app to suit your fleet's unique requirements with ROLLER's adaptable and modular design to drive your ROI.

Accelerate cash flow by getting proof-of-delivery receipts and other trip documents to the office for instant review. If any documents need to be rescanned, drivers can receive feedback from the office while they have the paper documents in hand.

Automate workflows by updating and syncing scans and documents to a TMS immediately through Motorcity Systems' TORQUE Integration Network.

Realize immediate ROI with minimal time needed to deploy and train drivers. ROLLER is compatible with both iOS and Android devices.

Receive industry-leading support from Motorcity Systems' courteous, knowledgeable, and reliable staff.

Upgrade Your Transportation Technology

ROLLER joins a suite of integrated, cloud-based products from Motorcity Systems that deliver a rapid ROI and improved user experience. Combine ROLLER with Motorcity's RELAY™ cloud-based messaging platform and give your drivers an easy-to-use and robust driver-to-back-office communications platform.

Motorcity's software solutions and integration services enable customers to modernize and scale their operations by updating existing systems with better visibility, driver-to-back-office communications (to dispatch and other back-office), and a unified workflow experience. ROLLER integrates with most major telematics and TMS systems through Motorcity's TORQUE integration network.

ROLLER™

Integrated Workflow Native to the Motorcity Platform

Customize and automate your workflows using ROLLER

With Motorcity Systems ROLLER app, businesses customize workflows for efficiency. This user-friendly tool streamlines the workflow, enhances the driver experience, and automates tasks.

Maximize efficiency and streamline operations with a customized workflow tailored to your business needs, ensuring continuous driver movement even in low-signal areas and maximizing ROI. Our intuitive driver experience, combined with transparent trip requirements and workflow preview options, is complemented by the home screen, offering easy access to current tasks and ensuring seamless operations.

Customize ROLLER configuration and workflows to meet your needs based on the attributes and business processes that you define.

Elevate document routing efficiency and compliance by seamlessly integrating the high-performance document scanning feature into your workflow, simplifying the driver experience.

Unleash the full potential of your fleet management by combining ROLLER with RELAY, creating the industry's most potent communication platform.

Save time and money by effortlessly designing and customizing forms using ROLLER's intuitive form designer – a simple yet powerful tool. ROLLER simplifies the process of adding conditional fields within the form designer, eliminating the need for complex and time consuming code.

Seamlessly integrate navigation services including your preferred third-party providers, with ROLLER's comprehensive support. Truck-safe turn by turn navigation is supported.
